

Morgantown Event Center Parking Garage

Morgantown, West Virginia

“The precaster greatly helped our design team through the many changes of the design process. The asset of their willingness to design and re-design the garage until we got the owner the exact product that suited their needs within budget and on schedule was irreplaceable.”

Adam Feathers
March-Westin Contractors

This 300 space, 4-level parking garage opened in 2009 as part of the new Event Center in Morgantown, WV. Contracted under a design-build agreement between the owner and contractor, the precaster was brought on board early and was relied on heavily during the design phase. After garage design was set, existing utility lines were uncovered during excavation, leading to a complete redesign of the garage. The precaster was able to submit an alternate garage layout and pricing information quickly that worked around the site issues and still kept the structure within the contractor’s budget.

Exterior precast columns and spandrels were cast with a limestone colored mix and sandblast finish, matching a 10-year old existing parking garage at the complex.
